

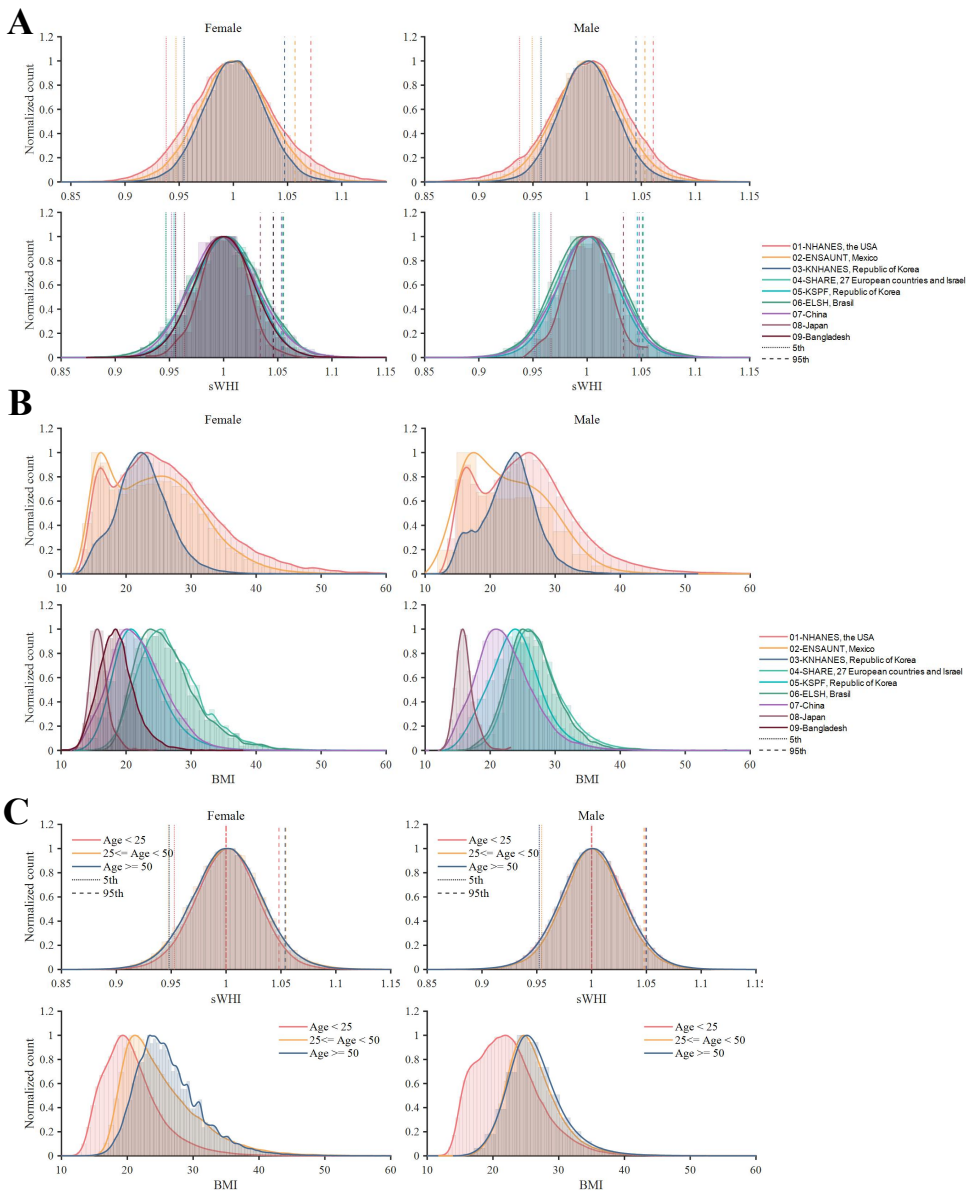

Fig. 4. Comparison of distribution curves for sWHI and BMI. (A) Distribution curves for sWHI. (B) Distribution curves for BMI. (C) Comparison of the distribution curves for sWHI (the top two panels) and BMI (the bottom two panels) across different age groups. In panel (C), data were pooled and categorized into three age groups (Age < 25, 25 ≤ Age < 50, and Age ≥ 50). For sWHI distribution curves, the 5th and 95th percentile positions are explicitly marked to illustrate the symmetry characteristics of the distribution.
